* Special categories of cited documents :

- *A* document defining the general state of the art which is not considered to be of particular relevance
- *E* earlier document but published on or after the international filing date
- *L* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- *O* document referring to an oral disclosure, use, exhibition or other means
- *P* document published prior to the international filing date but later than the priority date claimed

- *T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- *X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- *Y* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- *Z* document member of the same patent family

PCT/GB 99/ 02241

Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☐ Claims Nos.:
because they relate to subject matter not required to be searched by this Authority, namely:
2. ☒ Claims Nos.:
because they relate to parts of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:

see FURTHER INFORMATION sheet PCT/ISA/210
3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)

This International Searching Authority found multiple inventions in this international application, as follows:

see additional sheet

1. ☐ As all required additional search fees were timely paid by the applicant, this International Search Report covers all searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this International Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. ☒ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

1-4, 10, 11 (complete); 9, 18-48 (partially)

Remark on Protest

☐ The additional search fees were accompanied by the applicant's protest.

☐ No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

1. Claims: (1-4,10,11) - completely; (9,18-48) - partially

A cDNA molecule encoding a human NAALADase-L protein or a functional equivalent, derivative or bioprecursor thereof.

Corresponding coding sequences, vectors, recombinant host cells, therapeutic and pharmaceutical applications thereof, use in methods to identify agonists and antagonists, agonists and antagonists, use in enzymologic methods.

2. Claims: (5,6,12-14) - completely; (9,18-48) - partially

Idem as subject-matter 1 but limited to NAALADase II

3. Claims: (7,8,15-17) - completely; (9,18-48) - partially

Idem as subject-matter 1 but limited to NAALADase IV

4. Claims: (41,43) - partially

As far as not covered by inventions 1-3:

A method for quantifying enzyme activity which comprises contacting an enzyme of interest with a radiolabelled hydrolysable substrate thereof in the presence of scintillation proximity assay beads (SPA).

Said method, wherein said substrate is 3H-NAAG and said enzyme comprises a NAALADase.

5. Claims: (42,43) - partially

As far as not covered by inventions 1-3:

A method of identifying a compound which is an inhibitor or an enhancer of activity of an enzyme, comprising contacting an enzyme of interest with a radiolabelled hydrolysable substrate thereof and said compound to be tested in the presence of scintillation proximity assay beads (SPA), stopping the reaction by adding glycine buffer, and monitoring the signal from the substrate bound to said beads compared to a control.

Said method, wherein said substrate is 3H-NAAG and said enzyme comprises a NAALADase.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Continuation of Box 3.

Claims Nos.: 30-33, 37-40, 45-48

Claims 30-33, 37-40 and 45-48 refer to agonists and antagonists of the NAALADases claimed without giving a true technical characterization. Moreover, no such compounds are defined in the application. In consequence, the scope of said claims is ambiguous and vague, and their subject-matter is not sufficiently disclosed and supported (Art. 5 and 6 PCT). No search can be carried out for such purely speculative claims whose wording is, in fact, a mere recitation of the results to be achieved.

The applicant's attention is drawn to the fact that claims, or parts of claims, relating to inventions in respect of which no international search report has been established need not be the subject of an international preliminary examination (Rule 66.1(e) PCT). The applicant is advised that the EPO policy when acting as an International Preliminary Examining Authority is normally not to carry out a preliminary examination on matter which has not been searched. This is the case irrespective of whether or not the claims are amended following receipt of the search report or during any Chapter II procedure.
